COMP7610 Smart Contract Lab

DDL: 23:59, Qct 12 (Mon), 2026

Overview:

HKU Drone Club is building an on-chain club system. The club will issue a points token and release limited-edition commemorative club NFTs.

Club Token (Ticker: CPT)

- 1000 CPT will be minted in one batch upon contract deployment as all initial club points.
- Only club administrators are allowed to mint/distribute additional points.

Club Commemorative NFT (Campus-Memo)

- The maximum total supply of commemorative NFTs is 10.
- Minting 1 commemorative NFT consumes 100 CPT.

Students are required to implement **one additional custom functions**. (eg. club members may burn their own CPT voluntarily to apply for club withdrawal.) You need to design other reasonable functional logic.

Submissions:

Report Requirements (should include):

- Step-by-step instructions for full contract deployment and function testing (Include screenshots when needed.)
- Provide a detailed explanation of your newly implemented functions (your idea?)
- All final contract addresses
- NFT URI
- Name your file with your full name and UID
- Do not exceed two pages.

Code Submission

- Submit your code.
- Name your file with your full name and UID
